RESEARCH PROFILE

I am a third-year PhD researcher in History at the University of Cambridge and a cultural historian of knowledge and science, interested in how societies make sense of the natural world through historically situated practices of observation, communication, and representation. My research focuses on eighteenth- and nineteenth-century Europe, particularly Britain and France, and explores how knowledge was produced, circulated, contested, and transformed across social, institutional, and geographical settings. Taking the Great Comet of 1811 as a microhistorical lens, my doctoral project examines the scientific, cultural, commercial, and political practices through which knowledge of the heavens was constructed in London and Paris. My training in intellectual history and comparative literature informs an interdisciplinary approach to the relationships between knowledge, society, and politics.
